The Nobel Prize-Winning Chemist Dr. Omar Yaghi is a Jordanian-American chemistry professor. He points to a class of materials he pioneered called metal-organic frameworks, a solution to carbon and water crises in the air. The concept is gaining traction, thanks in part to **Atoco**, a startup he founded with **Dr. Samer Taha**, a former telecommunications executive turned clean-tech entrepreneur.

Dr. Samer Taha was a PhD. graduate in 2002 at UP-Pennsylvania State University; supervised by **Dr. M. Kavehrad**:

Dr. S.M. Taha

Ph.D., Electrical Engineering, Pennsylvania State University, UP, PA, USA, 2002.

Dissertation Title: "Modern Broadband Networking Issues, Quality-of-Service, Resource Allocation, and Service Disciplines".
